CURVE INPUT USING THE HIT MODE IN GTMODELER

When entering more than 20 curves in GTMODELER using the HIT mode of input, curve data may be lost or an abort may occur. This problem occurs when more than 20 curves are entered before the curve data are stored. Some users have noticed the curve data disappearing after a SAVE/RESTORE process.

Workaround:

Use the LIST mode in GTMODELER to enter the curve data or hit the STORE CURVE menu selection after every 20 curves are entered using the HIT mode.
