

DOCKET NUMBER
PROD. & UTIL. FAC... **50-289**

9 December 1980

Mr. John F. Ahern
Chairman Commissioner
U.S. Nuclear Regulatory Commission
1717 H Street, N.W.
Washington, D.C. 20555

Docket 50-289SP
THI Unit 1
Middleton, Penn.

Dear Mr. Ahern:

Even tho I live across the continent, I am concerned about the status of Three Mile Island. As you well know, we have plants in California that are either completely finished or are about finished. They have cost our residents many dollars to build. Thru all kinds of red tape and other problems, who knows when they will put out there first kilowatt.

I would hope Unit 1 of Three Mile Island will be allowed to start up again. I have alot of faith in the science field of this country, and I believe we have and are solving the problems people are so concerned with.

Nuclear power is a clean, safe and economical way of generating power.

I hope you and your commission will consider returning to service Unit 1 promptly.

Looking across the country, I think it is very interesting to note that a ny time nuclear power comes to a vote the public votes for it over whelmingly this should show the government agencies, that the public has confidence in nuclear power and considers it part of its energy program.

Thank you for your time in this most important matter.

Sincerely,

Mrs. Ruth A. Johnson
