To the NRC,

I am writing this letter as a concerned resident and mother living in the area near the Braidley nuclear plant. I really believe the location of this plant is an extreme hazard to the area. The population is growing very rapidly around here and if there ever was a problem at the plant, I believe a quick & safe evacuation of the area would be impossible. I know I, for one, would be the first to admit I would panic at the first sign of trouble. And I don't care how much caution is taken in the building of the plant, there is still the human error. I can't understand how it ever got the permit in the beginning to build next door to the steel mill. I'm sure

311-

it's easier to pass aside the
private affairs knowing you won't
be too far trapped in the
mill.

There are other alternatives
to consider. Dr. May spins air
of the ~~the~~ choice was cutting
have dramatically on my pen
wasp, it would be better than
accepting the possibility of radiation
poisoning better.

Please don't spread the Baily
penut.

Thank you,
Mrs. Allen
