

50-289

U.S. Nuclear Regulatory Commission
Mr. James F. Ahearne
Chairman:

January 29, 1981

Reference: Docket 50 - 289SP

I am writing in support accelerated use of nuclear energy through technologies that have been proven safe and efficient. This includes the TMI Unit 1, Middletown, Pa.

Nuclear power is safe, inexpensive, needed.
TMI - 1 needs to be restarted without delay.
America needs nuclear power if we are to survive the vicissitudes of present and future energies.

Please consider this favorably.

Sincerely yours,

Elizabeth L. Dulmage
