

Mr. John F. Ahern, Chairman
NRC
1717 H Street NW
Washington DC 20555

28 Jan 81

DOCKET NUMBER 50-281
PROD. & UTIL. FAC.

Dear Commissioner Ahern:

It is nearing two years since the accident took place at Three Mile Island Unit 2. During that entire time, the undamaged TMI Unit 1 has also been shut down by NRC directive, and essentially no action has been made toward resolving the open questions preventing its operation. Thus, the electric consumers of Pennsylvania and the shareholders of GPU are burdened not only with the costs of repairing TMI-2 and replacing its output, but also with replacement power for TMI-1.

I urge that the NRC expeditiously deal with any outstanding unresolved safety issues for TMI-1, correct any deficiencies which are identified, and allow it to resume production.

Sincerely,
Jerald L. Holm
