

1-
Dear Mr. Smith,

RECEIVED

DOCKET NUMBER **50-289**
PROD. & UTIL. FAC.

'81 FEB -6 P3:28

ATOMIC SAFETY AND
LICENSING BOARD PANEL
I've read recently - that the NRC
staff has recommended that Unit #
should be allowed to go on line at
5 percent power level - because there
may be brownouts. I see this as
blackmail.

It's unthinkable to me to even
consider the starting of Unit # at all.

The NRC staff stated that there
should be a hearing. Now they are
saying something else! The hearing
must be completed before this
decision is made.

Please Mr. Smith do what you
can - to see that all the intervenors
are heard before Unit # is allowed
to start at all.
Let the people have their say!

Sincerely,

Love Hunt
