

DOCKET NUMBER 50-289
PROD. & UTIL. FAC.

Mr. James F. [unclear], Chairman
Nuclear Regulatory Comm.

3
Feb 5, 1981

Dear Sir;

Three mile Island Unit 1 should be put into operation at once. It was not involved in the TMI accident at unit 2, it is ^{almost} completely modified like others that are operating while being modified. Most people in the area favor its operation at once. There's no good reason it should stay closed.

It is costing Metropolitan Edison and customers nearly \$500,000 a day — and that's ridiculous — to buy more expensive coal and oil instead of running for use as fuel.

Knock off the hearings, you're just making lawyers richer. Millions of dollars are wasted over the whole country by surveys this and hearings that.

Let's get on with it. We need cheap energy.

Yours truly,
Paul H. Glickman
