DOCKET NUMBER
PROD. & UTIL. FAC. 50-289

Dear Mr. Denton:

I wish to protest in the strongest terms against the restart of Unit 1 of Three Mile Island. Since the accident Commissioner Bradford has made a number of statements to the press, including one to the Washington Post that this plant would be shut up again. The subsequent history of the accident certainly does not warrant the reopening of this dangerous plant.

Furthermore, Metropolitan Edison has requested that the plant Unit 1 to restart before the necessary hearings have been completed before the NRC. Despite your own permit criteria Metropolitan on July, 1980 issued a notice of hearing as required by law + the denial appeal after the fact. Subsequent to issuance of "denial" but has no stopping up violation of hearing requirements + the laws of corporate persons.

This is the existence of safe nuclear energy + radiation. The Administration Committee Public power. It is to [illegible] responsible, may only serve such the decommissioning of nuclear plants + radiation hazards.
