

2-8-81

Dear Sir:

I wish to voice my concern
our energy policy.

I believe nuclear power
and is needed now as in the future.
believe Three Mile Island Unit #1 should be
on line, it has been modified and is safer
now than before. The accident on Unit #2 proved
the safety devices worked and well. It is
imperative we cut importing oil and having a
unit off line costing its customers \$500,000 per day
is not necessary.

What is the reason for having a plant in
California not on the line when it has been finished
for 10 years?

Consumer Power Co is building a dual unit
at Midland Michigan when it is complete are you
going to hold up its ability to give me electricity at
lower rates? There are many citizens who
have lowered their thermostats as their ability

to pay for the high cost of foreign oil has
even and even increased.

This is a great country it can be
great in the future but we have to get
Big Government to move on using what we have!
We have nuclear Power, its safe, its clean
its here —

Thank You

Donald A. Leach
