

Reference Docket 50-289SP
TMI-Unit 1,
Middletown, Pa.

Feb 11, 1981

DOCKET NUMBER
PROD. & UTIL. FAC.

50-289

Nuclear Regulatory Commission!

I believe the government decision
to keep TMI closed with the fact a TMI
was not involved or damaged in the accident
at TMI Unit 2 in March 1979.

58% of the residents are from
restarting the undamaged reactor.

The U.S. government has decided to stop
operation of TMI-1 the undamaged unit,
during modification. Other similar nuclear
plants elsewhere are operating while being
modified.

This is discriminatory + irrational.
Further more the cost to poor people the
Metropolitan Edison is nearly \$500,000 a
day. That \$500,000 is needed to purchase
more expensive coal + oil instead of uranium
for use as fuel. The N.R.C. has wanted to
decide the fate of TMI-1, + at this
time to decide a SUN LINE CRUISE

to be restarted without further delay!

Now we are the people talking + we
pay your salary + we want action

NOW. You know TMI-1 is different

from TMI-2, so why the delay? Get
off the stick, nuclear power is safe,

in expensive + needed by the people of

America. Less talk + more action

by you people. I've had it + if

I have to will write President Reagan
on this issue.

Yours Truly,

Miss Margaret Kischer
