DOCKET NUMBER
PROD. & UTIL. FAC. 50-289 (Restart)

February 12, 1981

Dear Mr. Denton:

I am very concerned about the NRC's lack of interest in protecting the public from radiation damage due to accidental releases and disposal of waste. Why do you favor nuclear plants to operate without evacuation plans or adequate safety devices? Why did you favor Metropolitan Edison's decision to delay the Hearings on TMI-2 without the legally required notice and hearing? Since a person should be held responsible for his actions, why should not nuclear power - when it would be obvious that it is not cost effective, please do not allow this unit to restart.
