

Dear Smith;

We feel that the reopening of TMI Unit #1 would have an adverse effect upon the immediate residents of this nuclear power plant and the safety of the east coast at large.

It appears that Reagan with his proposals to cut solar energy ^{costs} is encouraging the nuclear power industry despite daily accumulating evidence of the adverse effects of radiation & the ever present problem of a melt down due to mechanical or human error. It seems that people are expendable as long as this industry can experiment in people's back ^{yards} ~~yards~~ while the owners live miles away.

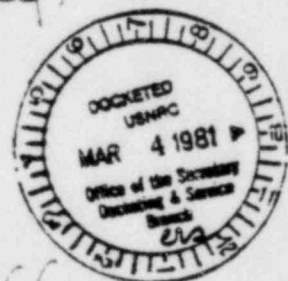

We encourage you, Ivan, as Chairman of Atomic Safety Commission, ^{not to} ~~to~~ be influenced from either side by money, power, threat of loss of jobs, etc. Look at all the facts, consider the opinions of the citizens and their safety.

Keep TMI Unit #1 closed.

Thank You

Paul J. Gzell
