LICENSING BOARD PANEL

DOCKET NUMBER  
PROD. & UTIL. FAC. 52-466

Kenneth Jones  
613 Houston St.  
Neacjados, Tx. 75161

Dear Mr. Wolfe,

I'm writing you today concerning Houston Lighting & Power's proposed Allen's Creek Nuclear Station. I've been a resident of Houston all my life, I've just recently moved to East Texas to study. I'm very concerned about this issue. I think nuclear power is the wrong way to approach our energy independence. I certainly am against the licensing, construction + operation of any plant in this country until the fundamental hazard of nuclear fission operation is dealt with seriously + solved. That fundamental hazard is that the wastes from normal operation of any plant will maim + poison + kill humans + every other life form for thousands of years. Calling it a hazard is a misnomer of sorts. Nuclear Power is hazardous because of what might unexpectedly happen. Poisonous nuclear waste is a reality of normal operation. It is insanity to produce energy for over-consumption now while at the same time producing poisons for our future.

I am opposed to any one who wants to produce these killing facilities + I am definitely opposed to having a Corporation build one in my home

H

+ dump their wastes in my + my families back yards.

Mr. Wolfe + am pleading with you as a member of a Federal Regulatory Commission - to regulate To stop this madness until we come to terms with these basic wrongs of nuclear power - then we begin to work out the secondary problems, of which as you know there are hundreds.

You have to ask yourself if you are satisfied with HLP's proposal and Act. I am not + have told you so -

Thank you.

Sincerely

Kenneth Jones
