

March 5, 1981

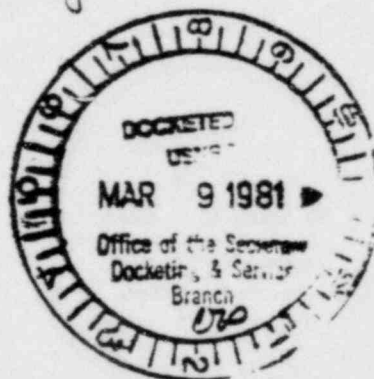

Secretary of the Commission
Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Commissioner Ahearn,

I am urging you to keep TMI-I shut down for the following reasons.

- 1.) there is overwhelming evidence of the mental stress induced by the Unit II accident on children that may not be reversible. Start up of Unit I will amplify the damage.
- 2.) Met-Eal has proven itself an inept operator with callous disregard of the public's well-being.
- 3.) Keeping Unit I shut down will provide the NRC an opportunity to demonstrate its responsibility of protecting the well-being of the Area.

Sincerely,
James H. Allen
