Mr. Darrell G. Eisenhut, Director  
Division of Licensing  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Re: Implementation of NUREG-0313, Rev. 1, "Technical Report  
on Material Selection and Processing Guidelines for BWR  
Coolant Pressure Boundary Piping," dated February 26, 1981  
(Generic Task A-42) (Generic Letter 81-03)  
Docket No. 50-367

Dear Mr. Eisenhut:

Northern Indiana Public Service Company's (NIPSCO) Bailly Generating Station Nuclear 1 (BGSN-1) is still in the very early stages of construction. Because of the delay in the completion of the NRC review of the BGSN-1 pile foundation, and the pending hearing regarding NIPSCO's request to extend the BGSN-1 construction permit, construction and engineering of BGSN-1 were halted and have not yet resumed. We will respond to the implementation of NUREG-0313, Rev. 1, as soon as practicable following resumption of engineering and construction of BGSN-1, or by July 1, 1983.

NIPSCO is a member of an Intergranular Stress Corrosion Cracking (IGSCC) Owner's Group which is working to resolve the staff concerns regarding IGSCC.

Very truly yours,

Boo/
