Dear Mr. Walker,

The subject is NRC and its handling of TMI.
It got very discouraging to view the inept performance
of NRC in this matter. This just seems No. 348
issue of Energy issue report by 554 of the
refusal to allow the rectification of ~~comp~~
undamaged unit No 1.

How can they allow all the other units
to run and not allow this particular E-W
unit to start?

The very next article on pg 555 cites the NRC
for being a contributor for delays in 25 other
new plants.

Isn't it about time that Congress legislated
some other body able to handle these procedures
in a more efficient manner? We feel we
do need the business of Nuclear Generation as there
is a need for it. Sincerely, H. L. Gallop
