

50.55(e) Report

Washington Public Power Supply System

Box 1223 Elma, Washington 98541 (206) 482-4428

Docket Numbers 50-508 and 50-509

March 30, 1982
G03-82-297

U. S. Nuclear Regulatory Commission, Region V
Office of Inspection and Enforcement
1450 Maria Lane, Suite 260
Walnut Creek, California 94596-5368

Attention: Mr. T. W. Bishop
Chief, Reactor Construction Projects Branch

Subject: PROJECT NOS. 3 AND 5
INTERIM REPORT OF POTENTIAL 10CFR50.55(e)
ARTIFICIAL ENHANCEMENT OF RADIOGRAPHIC FILM (D/W #41)

Reference: Letter, G03-82-021, dated January 11, 1982, R. S.
Leddick to B. H. Faulkenberry, same subject.

The referenced letter forwarded an interim report of the subject condition and noted that a final report would be provided to your office by March 31, 1982.

Corrective action included the identification of all spools on site that had enhanced radiographic film. The affected spools were then re-radiographed. Due to a concern with radiographic technique, one of the affected spools received a third radiograph which was subsequently forwarded to AP&E, Compton, for review and acceptance. To date, results of the AP&E review have not been received. As a result, the final report will be provided by April 30, 1982.

Should you have any questions or desire further information, please contact me directly.

R. S. Leddick, 760
