ATTN: DIRECTOR, Tech. INFO & Doc. Control

Dear Director;

This letter is a comment on the Draft Environmental Statement (DES) related to the operation of Perry Nuclear Power PLANT (PNPP) Units 1 + 2 ~~Rebut~~ Docket # 50-440 & 50-441. (NUREG-0884)

There is a discrepancy which I feel should be cleared up before any radioactive components are brought into the area. On pg. 6-2, under the heading "INDIRECT BENEFITS", Cleveland Electric Illuminating (CEI) states that 399 ~~are~~ people will be employed annually by Perry.

Yet on page 5-74, under "EMERGENCY PLANNING" there is shelter for only 55 people in case of accident. I was under the impression that CEI was building a safe facility that would provide protection to all on-site employees.

A second question that comes to mind is this: What kind of accident is this shelter supposed to protect the workers from? If it is an explosion, will these shelters be adequate? If the air is contaminated, will these shelters hold a second source of oxygen and for how long? Will these shelters be equipped with emergency equipment such as protective clothing, food, water, etc., or will the walls be lead-lined?

page 2

These things must be resolved before placing any radioactive materials at Perry.

CEI has a responsibility to its workers to see that they are protected.

Sincerely,
Patty Blubaugh
