United States Nuclear Regulatory Commission
Washington, D.C. 20555

BRUNSWICK STEAM ELECTRIC PLANT, UNIT NOS. 1 AND 2
DOCKET NOS. 50-325 AND 50-324
LICENSE NOS. DPR-71 AND DPR-62
GENERIC LETTER NO. 81-34
BWR SCRAM SYSTEM PIPING INTEGRITY

Dear Mr. Eisenhut:

This is in regard to your August 31, 1981 letter (Generic Letter No. 81-34) on safety concerns associated with pipe breaks in the BWR scram system. Carolina Power & Light Company (CP&L) has reviewed the NRC staff guidance contained in NUREG-0803, "Generic Safety Evaluation Report Regarding Integrity of BWR Scram System Piping." Based upon this review, CP&L prepared a draft plant-specific response for the Brunswick Steam Electric Plant which has been undergoing extensive in-house review. As a result of this continuing review, we determined that additional documentation was required to support conclusions drawn in our plant-specific response. We directed our architect-engineer to perform these analyses which are scheduled to be completed by May 21, 1982. Based on this projection, CP&L will submit the Brunswick plant-specific response to Generic Letter No. 81-34 by June 4, 1982.

If you have any questions concerning this matter, please contact our staff.

Yours very truly,

P. W. Howe
Vice President
Technical Services
