## EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 While in mode 1, diesel generator (D/G) 1A failed to start for a periodic test  
03 and was declared inoperable. Since centrifugal charging (NV) pump 1B was out of  
04 service for periodic maintenance, neither NV pump was operable and unit shutdown  
05 was commenced. During the shutdown the reactor was manually tripped due to an  
06 unrelated feedwater problem. This violates T.S.3.5.2 and is reportable per T.S.  
07 6.9.1.12(b). Since offsite power was available throughout the incident the  
08 health and safety of the public were unaffected.

## CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 Apparent cause of the incident was the failure of the station design change  
11 implementation program to adequately control work on station modifications. NV  
12 pump 1B and D/G 1A were returned to service on April 24. Drawings will be pre-  
13 pared to accompany each modification with changes marked to avoid confusion, and  
14 a training program on the design change process and the proper usage of drawings  
will be developed.
