0 2 During the period April 12, 1982, to April 20, 1982, with the reactor at power oper-  
0 3 ation below 20%, the plant was operated in a degraded mode of LCO 4.2.11 on three  
0 4 separate occasions and LCO 4.2.10 on one occasion. These events are reportable per  
0 5 Fort St. Vrain Technical Specification AC 7.5.2(b)2. There was no effect on public  
0 6 health or safety. Related reports are RO's 81-020, 81-009, 80-36, 80-19, 80-11,  
0 7 79-02, and 78-39.

1 0 | A gradual ingress of moisture and oxidants occurred during a prolonged maintenance  
1 1 | outage which involved depressurizing the PCRV on several occasions. As the plant was  
1 2 | returned to power with corresponding higher temperatures, the result was off-gassing  
1 3 | of moisture from the core. Reactor power and temperatures were limited during de-  
1 4 | graded modes of operation. The reactor scrammed during some events which removed the  
7 8 9 LCO limits.
