Docket Nos. 50-338
50-339
License Nos. NPF-4
NPF-7

Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNITS 1 AND 2
PROPOSED TECHNICAL SPECIFICATION
SUPPLEMENTAL INFORMATION

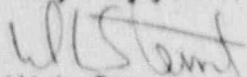

In a letter dated February 1, 1990, (Serial No. 90-38) Virginia Electric and Power Company requested amendments, in the form of changes to the Technical Specifications, to Operating License Nos. NPF-4 and NPF-7 for the North Anna Power Station Units 1 and 2 respectively. This proposed change will replace the Independent/Operational Event Review Group with the Management Safety Review Committee (MSRC) as the organization responsible for the offsite review function.

During telephone conversations with your staff minor changes were requested to address the constitution of a quorum and the timeliness of the MSRC meeting minutes. The requirement for a quorum is being changed from a minimum of four members to at least 50% of the members. The meeting minutes will be required to be prepared and distributed within 14 days of the meeting rather than prior to the next meeting. The revised Technical Specification pages are included in the attachment 1.

These minor changes do not impact the results of our original safety analysis and the significant hazards consideration determination. Please replace the appropriate pages in the February 1, 1990 submittal with the attached Technical Specification pages (6-8 & 10 Unit 1 and 6-9 & 11 Unit 2). The basis of our significant hazards consideration determination provided in our February 1, 1990 letter remains valid.

If you have any further questions or need additional information to process this request, please call.

Very truly yours,

W. L. Stewart
Senior Vice President - Nuclear
