Revisions to Technical Specification Change Requests
92-11 and 92-10

- REFERENCE 1) Letter from G. J. Beck (PECo) to NRC dated
March 5, 1993
- 2) Letter from G. A. Hunger (PECo) to NRC dated
March 11, 1993

Dear Sir:

The reference 1 letter submitted Philadelphia Electric Company's (PECo) Technical Specification Change Request (TSCR) 92-11. Reference 2 submitted PECO's TSCR 92-10. This letter revises both TSCRs to reflect changes agreed upon between PECO and the NRC staff during the review of the TSCRs. The revisions are intended to provide clarity and to correct a typographical error, respectively.

TSCR 92-11 originally requested a change to the PBAPS Technical Specifications (TS) to amend pages 240u and 240w in support of modification 5280. Modification 5280 replaces the existing outdated Terra Technology Corporation seismic monitoring instrumentation with a new solid state system manufactured by Kenometrics. The Kenometrics system consists of SSA-3 recorders, an SSP-1 computer and new triaxial accelerometers. Because the function of the seismic monitoring system remains unchanged, PECO is requesting the NRC review and approve the proposed TSCR only, not the modification itself.

ADD 11

Attachment 1 to this letter contains the revised TSCR 92-11 pages 240u (Table 3.15) and 240w, (its associated Bases) for PBAPS Units 2 and 3. Attachment 2 contains the revised TSCR 92-10 page 7, also for PBAPS Unit 2 and 3. Please substitute them for the pages submitted with the referenced letters.

We have concluded that the proposed revisions do not affect the finding of the no significant hazards considerations previously submitted.

If you have any questions concerning this submittal, please contact us.

Sincerely,

G. A. Hunger, Director
Licensing Section
