EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 At 1540 hours, June 21, 1982, an investigation of problems with operation of the 100'
 03 Elevation Containment Air Lock revealed that the inner door latch mechanism had failed
 04 and the door had swung open rapidly, breaking the swing chain and bending the
 05 mechanical stop. The air lock was declared inoperable and Action Statement 3.6.1.3.a
 06 was entered. The outer door was operable and was locked closed to insure containment
 07 integrity. The occurrence constituted inadequacy in the implementation of procedural
 08 controls in accordance with Technical Specification 6.9.1.9.c. (82-051, 82-047,
 82-045, 82-044, 82-023)

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 The air supply to the seal interspace had been inadvertently left open, and the latch
 11 had not fully engaged due to the linkage failure. Leakage past the inner seal resulted
 12 in pressurization of the air lock, and finally in the door being blown open. The door
 13 was repaired, and the action statement terminated. Proper operation of the air lock
 14 will be emphasized in station training.
