OPERATING LICENSE DPR-57
PLANT STARTUP TEST SUMMARY REPORT

Gentlemen:

Per the requirements of Plant Hatch Unit 1 Technical Specification 6.9.1.1, Georgia Power Company (GPC) hereby submits a Plant Startup Test Summary Report. The report presents the results of the static and dynamic functional core tests performed during startup from the Spring 1990 Unit 1 maintenance/ refueling (M/R) outage. The unit is not operating in Cycle 13. The report is being submitted since a reload batch of General Electric GE-9 fuel bundles are included in this reload core. This fuel bundle design has been reviewed and approved by the NRC via NEDE-24011-P, "General Electric Standard Application of Reactor Fuel." As expected, the testing identified no unexpected behavior of the reactor core and instrumentation.

Please contact this office if you have questions.

Sincerely,

W. G. Hairston, III

GKM/eb
