Mr. Norman C. Moseley
Director, Region II
Office of Inspection and Enforcement
U.S. Nuclear Regulatory Commission
230 Peachtree Street, N.W., Suite 818
Atlanta, Georgia 30303

Dear Mr. Moseley:

Re: IE:II:AKH
50-250/75-16
50-251/75-16

Florida Power and Light Company has examined the subject inspection report which noted the following item of non-compliance:

"Contrary to Technical Specification 6.9.3, the licensee did not submit in writing within 90 days, the Unit No. 4 inservice inspection report to the Nuclear Regulatory Commission."

Our response is as follows:

The overdue Inservice Inspection Report was transmitted to the Nuclear Regulatory Commission on November 20, 1975.

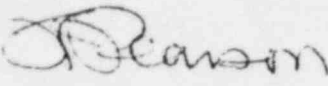

A procedure is now being written to describe the scheduling and preparation of reports to the Nuclear Regulatory Commission which are required by Technical Specifications. Adherence to such a procedure should prevent further noncompliance. The first draft of the procedure will be completed by January 1, 1976. Following review, comment, and potential revision, the procedure is expected to become effective by about February 1, 1976.

In addition, if there is a valid reason for delaying the submission of a report required by Technical Specifications, a letter will be sent to the Nuclear Regulatory Commission describing the circumstances and requesting extension of the 90-day time limit.

Mr. Norman C. Moseley
