EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 While in Mode 3 at 1200, steam driven AFW pump 3P-140 failed to run at rated speed
0 3 during ISI testing and was declared inoperable. Action Statement 'a' of LCO 3.7.1.2
0 4 was invoked and cooldown to Mode 4 was commenced at 1200 on 1/27/83, since the pump
0 5 could not be returned to operable status within 72 hours. Public health and safety
0 6 were not affected, since any one of the two remaining AFW operable pumps (each able
0 7 to provide 100% of required capacity) would have performed the necessary decay heat
0 8 removal function, if required.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Pump inoperability was attributable to a damaged motor on the Limitorque valve operator
1 1 for stop valve 3HV-4716. The motor was replaced. The pump successfully passed
1 2 ISI testing at 1646 on 1/27/83 and Mode 4 cooldown was halted. The cause of the
1 3 failed motor is under investigation. When the results of this effort are available,
1 4 a revised LER will be provided.
