EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

During shutdown surveillance testing with reactor pressure at 400 psig, instrument line excess flow check valve XfV-4643A would not check closed and XfV-4637 and XfV-4458B gave indications of both open and closed when tested. T.S.3.7.D requires all instrument line flow check valves to be operable. There have been no previous similar occurrences.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

Cause can not be determined at this time. Upon plant startup after refueling, the check valves will be retested and an update report will be issued within 30 days from the test date providing results and any corrective actions. Valves manufactured by Marotta Scientific Controls, Inc.
