EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | While operating at 86% power increasing the average drywell temperature
0 3 | was discovered to be 135.3°F. From 100.2% of its limiting value, it was
0 4 | reduced to 99.9% within 2 hours. This was accomplished by charging the
0 5 | chilled water system with freon & by stopping power increases. The aver
0 6 | age drywell temperature in excess of 135°F constitutes violation of
0 7 | Tech. Specs. 3.6.1.7. The health & safety of the public were not affect-
0 8 | ed by this non-repetitive event.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 The high drywell average temperature was caused by the CRD access to
1 1 the underside of the vessel through the biological shield being left
1 2 off during drywell closeout. The access was replaced & some of the dry-
1 3 well insulation was also repaired. Further investigation did not re-
1 4 veal any other factors attributable to the high drywell temperature.
