Mr. William T. Russell, Director  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington D.C. 20555

Attn.: Document Control Desk

Subject: Quad Cities Station Units 1 and 2  
Request for Extension to the Response Date for an NRC Request for  
Additional Information (RAI)  
NRC Docket Nos. 50-254 and 50-265

References: (1) J.L. Schrage to T.E. Murley letter dated January 7, 1993.  
(2) C.P. Patel to D.L. Farrar letter dated May 12, 1994.

Mr. Russell,

In Reference (1), Commonwealth Edison Company (ComEd) submitted a proposed third ten-year interval Inservice Inspection (ISI) program for Quad Cities Station Units 1 and 2. In Reference (2), the NRC Staff identified additional information which would be required in order to review and approve the proposed ISI Program. The NRC requested the submittal of this information by July 12, 1994.

The purpose of this letter is to request an extension to this date. This extension request is based upon the level of resources which ComEd has applied towards the resolution of critical ISI issues (including the Core Shroud crack indications) during the current refuel outage at Quad Cities Station Unit 1 (Q1R13). The application of these resources (initially five full-time engineers) has severely limited the ability of the cognizant engineers to prepare a response to the RAI.

ComEd anticipates that resources will not be available to initiate development of the RAI response until start-up of Unit 1 following the current refuel outage (start-up scheduled for July 30, 1994). ComEd will submit the RAI response within sixty days after start-up of Unit 1. ComEd will promptly notify the NRR Project Manager of any revisions to the current schedule for start-up of Unit 1.
