EVENT DESCRIPTION AND PROBABLE CONSEQUENCES ⑩

② During the Unit 2 refueling outage, snubber 52 was replaced with an instrumented
③ mechanical snubber to investigate previous five snubber failures. Snubber 52 (S/N
④ 6991) which had previously passed its functional test, failed during a test required
⑤ to return a snubber to the store room. Four additional snubbers were satisfactorily
⑥ tested to verify that this was an isolated incident. Safety significance is minimal
⑦ because NDE performed on "D" main steam line revealed no abnormalities in the high
⑧ stress weld areas. Similar event reported by R.O. 83-12/01T on Docket 50-237.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS ⑳

① The cause of failure is unknown. The station and Station Nuclear
② Engineering are investigating the failure mode and possible causes.
③ Inspection of snubbers will be continued as required by Technical
④ Specifications. A supplemental report will be issued when the investigation
⑤ is complete.
