

UNITED STATES OF AMERICA
NUCLEAR REGULATORY COMMISSION

BEFORE THE ATOMIC SAFETY AND LICENSING BOARD

In the Matter of
ARIZONA PUBLIC SERVICE
COMPANY, et al.

(Palo Verde Nuclear
Generating Station,
Units 2 and 3)

Docket Nos. STN 50-529
STN 50-530

JOINT APPLICANTS' RESPONSE TO
WEST VALLEY'S SECOND SET OF INTERROGATORIES

GENERAL OBJECTIONS

1. Joint Applicants object to Petitioner's Instruction No. 19 to the extent it purports to alter the applicable rules and regulations relating to the duty of a party to supplement its responses. See 10 CFR §2.740(e).

2. Joint Applicants object to Interrogatories 2, 3, 4, 7 and 9 on the grounds that, as phrased, they would require identification of documents and correspondence subject to the attorney work product privilege and/or the attorney client privilege. Joint Applicants are in the process of identifying the documents described in the above-referenced interrogatories and to the extent not privileged will identify such documents when review is completed. Due to the number of entities involved and the number of docu-

D803

1 ments to be reviewed, Joint Applicants were unable to com-
2 plete such review prior to the date required for the sub-
3 mission of these responses.

4 INTERROGATORIES

5 INTERROGATORY NO. 1. Identify all oral communications con-
6 cerning any delays in the projected date for fuel loading
7 Unit 2 which occurred:

- 8 a. Before filing of the Petition;
9 b. subsequent to filing of the Petition.

10 ANSWER

11 1. Joint Applicants object to Interrogatory No.
12 1 on the grounds that it would be burdensome and oppressive,
13 if even possible, to identify all oral communications con-
14 cerning any delays, or possible delays, in the projected
15 fuel loading date for Unit 2. Further, such information is
16 irrelevant to the subject matter of this proceeding and to
17 the contentions set forth in the parties' Stipulation of
18 March 30, 1983, and is not likely to lead to the discovery
19 of admissible evidence. The fuel loading date has not been
20 delayed beyond the August, 1984 date previously established,
21 but there obviously are continuous discussions concerning
22 the scheduling of work and materials and the completion of
23 the Unit 2 construction in a timely manner to meet the
24 August, 1984 date. It would be virtually impossible to
25 isolate and identify such communications as requested in
26 this interrogatory.

1 INTERROGATORY NO. 2. Identify all documents, including but
2 not limited to all reports and correspondence, relating or
3 referring to cooling tower salt emissions, prepared:

4 a. between completion of the EIS-OS and
5 filing of the Petition (but not including Marley Telecon
6 Memo, dated September 29, 1982, listed in response to Peti-
7 tioner's First Set of Interrogatories, No. 3(b));

8 b. subsequent to filing of the Petition.

9 ANSWER

10 2.a. None, other than as identified in re-
11 sponse to Petitioner's First Set of Interrogatories.

12 b. Object. See General Objection No. 2.

13
14 INTERROGATORY NO. 3. Identify all documents, including but
15 not limited to all reports and correspondence, relating or
16 referring to spray pond salt emissions, prepared:

17 a. between completion of the EIS-OS and
18 filing of the Petition;

19 b. subsequent to filing of the Petition.

20 ANSWER

21 3.a. None.

22 b. Object. See General Objection No. 2.

23
24 INTERROGATORY NO. 4. Identify all documents, including but
25 not limited to all reports and correspondence, relating or
26 referring to evaporation ponds salt emissions, prepared:

1 a. between completion of the EIS-OS and
2 filing of the Petition;

3 b. subsequent to filing of the Petition.

4 ANSWER

5 4.a. None.

6 b. Object. See General Objection No. 2.

7
8 INTERROGATORY NO. 5. The Answer to Petitioner's First Set of
9 Interrogatories, No. 9(a), states that 1971 data from Re-
10 search Cottrell, Inc. were the basis for the salt drift
11 droplet size distribution analysis in the ER.

12 a. Identify the documents which present
13 those data;

14 b. State the reasons for choosing Research
15 Cottrell's 1971 size distribution rather than Marley's size
16 distribution.

17 ANSWER

18 5.a. The document presenting the data ob-
19 tained from Research-Cottrell is the "FOG Model Descrip-
20 tion," July, 1974, by George Fisher.

21 b. Research-Cottrell's size distribution
22 was chosen because at that time a cooling tower vendor had
23 not been selected.

24
25 INTERROGATORY NO. 6. The Answer to Petitioner's First Set of
26 Interrogatories, No. 11, states that the rate of blowdown to

1 the evaporation ponds exceeds the evaporation rate from the
2 ponds.

3 a. Identify the documents which support that
4 conclusion;

5 b. State any other basis for reaching that
6 conclusion.

7 ANSWER

8 6.a. Bechtel Proprietary Study No. 13-CS-204;
9 Custodian: Bechtel. The ER-0L and the FSAR also describe
10 the flow rate to the evaporation ponds.

11 b. The basis for the conclusion stated in
12 answer to Petitioner's Interrogatory No. 11 (First Set) is
13 that the annual blowdown rate exceeds the annual evaporation
14 rate.

15
16 INTERROGATORY NO. 7. Identify all documents, including but
17 not limited to reports and correspondence, relating or re-
18 ferring to salt drift deposition patterns, prepared:

19 a. between completion of the EIS-OS and the
20 filing of the Petition;

21 b. subsequent to filing of the Petition.

22 ANSWER

23 7.a. None

24 b. Object. See General Objection No. 2.

25

26

1 INTERROGATORY NO. 8. NUS used its proprietary model, "FOG,"
2 to describe salt drift deposition patterns.

3 a. State when the "FOG" model was first
4 used;

5 b. Identify all documents concerning appli-
6 cation of the "FOG" model to power plants other than PVNGS.

7 ANSWER

8 8.a. "FOG" represents a computer model, the
9 development and use of which has extended over several
10 years. The initial version of the model was first utilized
11 in 1972.

12 b. NUS has employed different versions of
13 the FOG model at several fossil and nuclear plants, some of
14 which have not been built. Joint Applicants object to this
15 interrogatory on the grounds that the identification of
16 these proprietary documents sought by this interrogatory
17 would be oppressive and unduly burdensome and expensive. In
18 addition, the information sought by this interrogatory is
19 irrelevant to the subject matter of the instant proceeding
20 and to the contentions set forth in the parties' Stipulation
21 of March 30, 1983.

22
23 INTERROGATORY NO. 9. Identify all documents, including but
24 not limited to reports and correspondence, relating or re-
25 ferring to effects on crops, prepared:

26

1 a. between completion of the EIS-OS and
2 filing of the Petition;

3 b. subsequent to filing of the Petition.

4 ANSWER

5 9.a. None.

6 b. Object. See General Objection No. 2.

7
8 INTERROGATORY NO. 10. The Answer to Petitioner's First Set
9 of Interrogatories, No. 29, states that six samplers for
10 radiological monitoring have collected salt data since Oc-
11 tober, 1982. Identify all documents which present or ana-
12 lyze those salt data.

13 ANSWER

14 10. "Report of Analysis," dated 2/22/83, 3/8/83,
15 and 5/5/83, from CEP (Controls for Environmental Pollution)
16 present the data obtained from the samplers described in
17 answer to Petitioner's Interrogatory No. 29 (First Set).

18
19 INTERROGATORY NO. 11. The Answer to Petitioner's First Set
20 of Interrogatories, No. 30, describes monitoring devices
21 which are being used or planned to be used. Identify:

22 a. all documents that relate to the accur-
23 acy and reliability of each device;

24

25

26

1 b. all documents (other than those identi-
2 fied in response to the preceding interrogatory) that pre-
3 sent or analyze salt data collected to date;

4 c. state when and in what form monitoring
5 data will be reported hereafter from each type of device.

6 ANSWER

7 11.a.1. Dustfall Samplers: American Society of
8 Testing and Materials (ASTM) Standard Method for Collection
9 and Analysis of Dustfall (Settleable Particulates) D1739-70,
10 Annual Book of ASTM Standards, Part 26, Philadelphia, PA.

11 2. Low-Volume Samplers:

12 (a) "Instruction Manual, Schmidt Model
13 2-AXP-0, Constant Flow Air Sampler (Preliminary Copy),"
14 Schmidt Instrument Co., P.O. Box 111, San Carlos, California
15 94070.

16 (b) "Air Sample Collection (Environ-
17 mental), PVNGS, Station Manual Procedure No. 75RP-9ZZ19,
18 Rev.O," DRAFT.

19 (c) Letter from Schmidt Instrument Co.
20 to APS, dated March 29, 1983, regarding calibration of
21 Fischer and Porter Flowrators supplied on Order No. 10011798,
22 Dec. 24, 1982.

23 (d) Letter from Schmidt Instrument Co.
24 to APS, dated July 29, 1982, regarding accuracy of Schmidt
25 Model A-60 Precision Portable Flowmeter with 2.5 scfm Float.

26

1 (e) Field log books for the air sampler
2 collection filter.

3 (f) Maintenance and calibration sched-
4 ule for environmental air samplers.

5 (g) CEP Proposal No. CEP-83-03035
6 "Proposal to NUS, Corp. for laboratory services associated
7 with salt deposition and impact monitoring plan for PVNGS,
8 Units 1, 2 & 3,"

9 (h) Results of laboratory analysis
10 ("Reports of Analysis" identified in answer to Interrogatory
11 No. 10, above.)

12 3. Camera/Film: NUREG/CR-1231, "Remote
13 Sensing for Detection and Monitoring of Salt Stress on Vege-
14 tation: Evaluation and Guidelines," Final Report, Sept.
15 1976 - March 1979, Published March, 1980. Prepared by In-
16 tera Environmental Consultants, Inc. for U.S. Nuclear Reg-
17 ulatory Commission.

18 b. The only documents currently available
19 are those identified in answer to Interrogatory No. 10
20 above.

21 c. Information concerning the reporting of
22 sampling data is contained in the Salt Deposition and Impact
23 Monitoring Plan for PVNGS, Units 1, 2 & 3, February, 1983.

24
25 INTERROGATORY NO. 12. The Answer to Petitioner's First Set
26 of Interrogatories, No. 42, identifies 12 month cooling

1 tower operation as an off design condition considered before
2 completion of the EIS-OS.

3 a. State whether any additional off design
4 conditions were considered;

5 b. Describe any such conditions and their
6 influence upon evaluation undertaken in the ER;

7 c. State whether any off design conditions
8 have been considered since completion of the EIS-OS and
9 filing of the Petition;

10 d. State whether any off design conditions
11 have been considered subsequent to filing of the Petition;

12 e. Describe any off design conditions iden-
13 tified in response to c. and d. above and your plans to take
14 them into account in operating PVNGS;

15 f. Identify all documents that describe or
16 analyze any off design conditions identified in response to
17 this interrogatory.

18 ANSWER

19 12.a,b. Joint Applicant's answer to Peti-
20 tioner's Interrogatory No. 42 (First Set) also identified
21 the off design operating condition of the assumption that
22 the circulating water chemistry concentrations would exceed
23 those expected at 15 cycles of concentration. That assump-
24 tion led to the over-estimation of the salinity of the salt
25 drift from the cooling towers.

26 c. None, other than those previously identified.

1 d. None, other than those previously iden-
2 tified.

3 e. N/A.

4 f. ER-CP; ER-OL.

5 INTERROGATORY NO.13. Identify the documents that serve as
6 as a basis for the figures contained in the ER and EIS con-
7 cerning the salinity of effluent to be used for cooling at
8 PVNGS.

9 ANSWER

10 13. Joint Applicants' Exhibit BB, Water Reclama-
11 tion Studies, PVNGS, Units 1, 2 and 3, by Bechtel Power
12 Corp.

13
14 INTERROGATORY NO. 14. The Answer to Petitioner's First Set
15 of Interrogatories, No. 48, identifies documents relating or
16 referring to PVNGS cooling tower drift elimination.

17 a. State whether this answer includes docu-
18 ments relating to both the structure and the operation of
19 the drift eliminators;

20 b. If the Answer fails to include the
21 former, identify all such documents.

22 ANSWER

23 14.a,b. The answer to Petitioner's Inter-
24 rogatory No. 48 (First Set), includes documents relating to
25 both structure and operation of the drift eliminators. In
26 addition, the Marley Cooling Tower Company's Operation and

1 Maintenance Instructions Manual identified in answer to
2 Petitioner's Interrogatory No. 47 (First Set), relates to
3 the operation and structure of the eliminators.

4
5 INTERROGATORY NO. 15. State whether the cooling tower
6 vendor:

7 a. makes or has made cooling towers of the
8 type being installed at PVNGS incorporating a system that
9 removes more drift than the system chosen for PVNGS; and

10 b. can make such a system.

11 ANSWER

12 15.a. Marley does not make a cooling tower of
13 the type installed at PVNGS which incorporates a drift
14 elimination system that removes more drift than the system
15 being utilized at PVNGS.

16 b. Marley continuously investigates and
17 researches drift elimination system designs which may prove
18 to be more effective than the system installed at PVNGS. At
19 the present time, however, Marley does not have a system
20 which has proven capable of removing more drift than the
21 system utilized at PVNGS.

22
23 INTERROGATORY NO. 16. If your answer to the preceding in-
24 terrogatory is yes, describe:

25 a. the drift elimination systems;

26 b. the places of their use; and

1 c. state the basis for choosing the drift
2 elimination system used in the PVNGS cooling towers.

3 ANSWER

4 16.a.-c. Not Applicable.

5 INTERROGATORY NO. 17. Identify which of the documents iden-
6 tified in response to Petitioner's First Set of Interroga-
7 tories, No. 50, specifically address alternatives to the
8 cooling tower drift elimination system chosen for PVNGS.

9 ANSWER

10 17. Letter, Wilson to Van Brunt, December 19,
11 1975, (Proprietary). Custodian: APS.

12
13 INTERROGATORY NO. 18. For each individual identified in
14 response to Petitioner's First Set of Interrogatories now or
15 previously affiliated or involved with:

- 16 a. NUS;
- 17 b. Bechtel;
- 18 c. Marley;
- 19 d. APS;
- 20 e. University of Arizona Crop Study state:
- 21 state:
- 22 a. a summary of his formal education;
- 23 b. the name and address of each school
- 24 where he received any special education or training relevant
- 25 to the subject matter of the interrogatory in response to
- 26

1 which his name was identified and a description of the
2 training;

3 c. the name or description of each degree
4 he has received, including the date each was received, and
5 the name of the school from which he received such degree;

6 d. the books, papers, and articles which he
7 has authored;

8 e. his employment over the past ten years,
9 including employer, dates, and duties.

10 18. NUS:

11 1. George E. Fisher

12 a.-c. New York University,
13 M.S., Meteorology, 1968; Florida State University, B.S.,
14 Meteorology, 1963.

4 clogist, Air Force Cambridge Research Laboratory, Bedford,
5 Massachusetts, 1960-1967; Planned and conducted field ex-
6 periment in atmospheric diffusion.

7 (d) Climatological Ana-
8 lyst, Environment Technical Applications Center, Washington,
9 D.C., 1957-1960; Performed climatological studies.

10 (e) Weather Officer
11 (Forecaster), 1948-1955; Provided aviation forecasts.

12 (f) USAF Pilot 1944-1973.

13 8. Henry Firstenberg

14 a.-c. Columbia University,
15 M.S., Engineering Sciences, 1963; Polytechnic Institute of
16 Brooklyn, B.Ch.E., Chemical Engineering, 1957; City Col-
17 lege of New York, graduate courses in Nuclear Engineering,
18 1959.

19 d.(1) "Environmental Factors
20 in Siting LNG Facilities" (coauthor), Proceedings of the
21 Fourth International Conference on Liquefied Natural Gas,
22 Algiers, Algeria, June 24-27, 1976.

23 (2) "Burnout in Fog Flow:
24 A Droplet Diffusion Model" (coauthor), Journal of Heat
25 Transfer (Series C of Transactions ASME), May 1962.

26

1 (3) "Boiling Songs and Asso-
2 ciated Mechanical Vibrations, NDA 2131-12, June 30, 1960.

3 e.(1) NUS Corporation, 1963-
4 1969, 1970-Present; Executive consultant to Environmental
5 Systems Group.

6 (2) Consultant, 1969-70

7 (3) United Nuclear Corpora-
8 tion, Development Division (formerly NDA), 1957-1963; Ana-
9 lytical engineer.

10 9. Michael Septoff

11 a.-c. New York University,
12 M.S., Meteorology, 1968; City College of New York, B.S.,
13 Meteorology and Oceanography, 1966; University of Maryland,
14 graduate courses in meteorology, 1968-Present.

15 d.(1) "Atmospheric Dispersion
16 at a Coastal Rough-Terrain Nuclear Plant Site" (coauthor),
17 Annual Meeting, American Nuclear Society, San Diego, Cali-
18 fornia, June, 1978.

19 (2) "Results of an Offshore
20 Dispersion Program Conducted at the San Onofre Nuclear Gen-
21 erating Station," Joint Conference on Applications of Air
22 Pollution Meteorology, Salt Lake City, Utah, November, 1977.

23 (3) "A Rational Approach to
24 Accident Dose Assessment," 1975 Annual Meeting, American Nu-
25 clear Society, New Orleans, Louisiana, June, 1975.

26

1 (4) "A Survey of Cloud
2 Seeding Technology," M.S. thesis, New York University, New
3 York, N.Y., 1968.

4 e.(1) NUS Corporation, 1970-
5 Present; Principal Meteorologist.

6 (2) GEOMET, Inc., 1968-
7 1970; Analysis of problems in atmospheric diffusion and air
8 pollution control and abatement programs.

9 (3) New York University,
10 1967-1968; Research Assistant.

11 (4) City College of New
12 York, 1966-1967; Teaching fellowship.

13 (5) U.S. Weather Bureau,
14 summer, 1966; Participated in experimental use of trans-
15 missometer network to test feasibility to measure visibility
16 in fog.

17 10. Terry A. Ritter

18 a.-c. Loyola University of
19 Los Angeles, M.S., Sanitary and Environmental Engineering,
20 1975; Loyola University of Los Angeles, B.S., Civil Engi-
21 neering, 1967.

22 d. None.

23 e.(1) NUS Corporation, 1977 -
24 Present; Management of environmental impact programs and
25 preparation of environmental reports.

26

1 (2) Los Angeles Department
2 of Water and Power, 1967-1969, 1972-1977; Liaison with state
3 and federal regulatory agencies; prepared water quality
4 studies.

5 (3) U.S. Army, Engineer
6 Command, 1969-1972; Consulting and supervisory engineer.

7 11. Lawrence T. Klein

8 a.-c. Polytechnic Institute
9 of Brooklyn, B.Ch.E., Chemical Engineering, 1958; Oak Ridge
10 School of Reactor Technology (ORSORT), Certificate in Nu-
11 clear Reactor Science and Technology, 1963.

12 d. None.

13 e.(1) NUS Corporation, 1964-
14 1966, 1972-Present; Technical and managerial responsibili-
15 ties.

16 (2) General Electric Com-
17 pany, 1966-1972; Requisition and sales; also technical re-
18 sponsibilities.

19 (3) Tennessee Valley Au-
20 thority, 1961-1963; Nuclear hazards control engineer.

21 (4) Martin Company, Nuclear
22 Division, 1959-1961; Analysis of nuclear hazards involved in
23 isotope-powered thermoelectric generators.

24 (5) U.S. Atomic Energy Com-
25 mission, 1958-1959; Review and evaluation of research and
26 development programs.

12. Joseph J. Dinunno

a.-c. University of Maryland,
M.S., Electrical Engineering, 1954; The Pennsylvania State
University, B.S., Electrical Engineering, 1942; Oak Ridge
School of Reactor Technology, 1956-1957.

d. None.

e.(1) NUS Corporation, 1972-
Present; Technical Director, Environmental Systems Group.

(2) U.S. Atomic Energy Com-
mission, 1959-1972; Various responsibilities associated with
the engineering, safety analysis and public protection as-
pects of nuclear facilities.

(3) U.S. Navy, 1942-1959;
Engineer.

(4) Westinghouse Electric
Co., 1942; Engineer.

13. Carl G. Mattsson

a.-c. University of Southern
California, M.S., Candidate, Environmental Engineering,
1973; Western Washington State College, B.A., Mathematics
and Physics, 1967.

d. None.

e.(1) NUS Corporation, 1973-77;
Assisted in project coordination and management of siting
studies and environmental reports and programs.

.

1 (2) Puget Sound Naval Ship-
2 yard, Radiological Engineering Division, 1968-1972; Project
3 leader.

4 14. Paul V. Morgan

5 a.-c. University of Pitts-
6 burgh, Pittsburgh, Pennsylvania Graduate Studies in Environ-
7 mental Health, 1967; University of Pittsburgh Graduate
8 School of Public Health, Pittsburgh, Pennsylvania, M.S.,
9 Bygiene, Water Pollution Control, 1961; University of Pitts-
10 burgh, Pittsburgh, Pennsylvania, M.S., Microbiology, 1958;
11 University of Pittsburgh, Pittsburgh, Pennsylvania, B.S.,
12 Bacteriology, 1950.

13 d. See attached.

14 e.(1) NUS Corporation, 1967-80;
15 Management of aquatic and terrestrial ecological programs.

16 (2) University of Pitts-
17 burgh, 1950-1954, 1961-1967; Conducted studies of the en-
18 vironmental impact of nuclear power station.

19 (3) Mellon Institute of In-
20 dustrial Research, 1954-1961; Research and field investiga-
21 tion.

22 BECHTEL

23 1. W. G. Bingham, Jr.

24 a.-c. B.S., Engineering, Uni-
25 versity of California at Los Angeles; Business Management
26

1 Certificate, University of California; Masters Business Ad-
2 ministration, Golden Gate University.

3 d.(1) "Makeup Water Supply
4 for Dry Site Power Plant," ASME Conference, 82-JPGC-PWR-49.

5 (2) "Management Science Ap-
6 plications in the Planning and Design of a Water Supply Sys-
7 tem for Nuclear Power Plants," The Institute for Management
8 Science, February 15, 1979;

9 (3) "Design Innovations
10 Palo Verde Nuclear Generating Station," ANS Topical Confer-
11 ence, Cleveland, Ohio, August, 1981.

12 (4) "Design for Plant Main-
13 tainability and Operability," Id.

14 (5) "Utilization of Design
15 Change Control to Reduce Cost and Schedule Impacts on Power
16 Projects," ASME Conference.

17 (6) "Will Nuclear Power
18 Plant Standardization Reduce the Licensing Impact on Con-
19 struction," ANS Topical on Nuclear Plant Construction,
20 1976.

21 e. Bechtel Power Corpora-
22 tion; Project Engineer and Project Engineering Manager,
23 responsible for all engineering on PVNGS and water reclama-
24 tion facilities (May 1973-Present).

25

26

2. Robert R. Stiens

a.-c. M.S., Engineering, California State University, Northridge, 1968; B.S., Chemical Engineering, Washington University, St. Louis, Missouri, 1956.

d. "Makeup Water Supply for Dry Site Power Plant," ASME Conference 82-JPGC-PWR-49.

e.(1) Bechtel Power Corporation; Nuclear Group Supervisor, Alvin W. Vogtle Nuclear plant (May 1973-May 1974);

(2) Assistant Project Engineer and Project Engineer responsible for power plant engineering on the PVNGS (1974-Present).

3. Dennis G. Keith

a.-c. B.S., Mathematics, Stanford University, Palo Alto, 1961; U.S. Navy Submarine School, 1961; U.S. Navy Nuclear Power School, 1962; M.S., Operations Research, Stanford University, 1969.

d.(1) "Experience in Licensing a Replicate Plant at the Same Site," American Power Conference, 1978.

(2) "Will Nuclear Power Plant Standardization Reduce the Licensing Impact on Construction," ANSW Topical on Nuclear Power Plant construction, 1976.

.

1 e. Bechtel Power Corpora-
2 tion; May 1973-August, 1977, Nuclear Group Supervisor, Palo
3 Verde Nuclear Generating Station; August 1977-August 1978,
4 Project Coordinator PVNGS Units 4 and 5; August 1978-May
5 1983, Assistant Project Engineer, responsible for preparation
6 of construction permit licensing documents and review of
7 operating license licensing documents.

8 4. Paul Barbour

9 a.-c. B.S., Engineering,
10 University of California, Los Angeles; 1955; M.S., Chemical
11 Engineering, University of Southern California, 1966; M.S.,
12 Environmental Engineering, University of Southern Califor-
13 nia, 1972.

14 d. None.

15 e. Bechtel Power Corpora-
16 tion; May 1973-August 1979, Nuclear and Environmental Staff
17 Specialist engaged in analysis, design and evaluation of
18 nuclear and fossil power stations; August 1979-September
19 1980, Licensing Engineer for San Onofre Units 1, 2 and 3;
20 September 1980-October 1981, Engineering Specialist for
21 SONGS Units 2 and 3; October 1981-December 1982, Deputy Nu-
22 clear Group Supervisor for PVNGS; December 1982-Present
23 PVNGS Nuclear Group Supervisor.

24 5. William W. Boles

25 a.-c. B.S., Chemical Engi-
26 neering, Cornell University, Ithaca, New York, 1968.

1 d. "Power Plant Wastewater
2 Disposal at the Palo Verde Nuclear Generating Station," EPRI
3 Zero Discharge Symposium, 1981.

4 e.(1) Dow Chemical Company,
5 May 1973-October 1973, Service Engineer;

6 (2) Bechtel Power Corpora-
7 tion; October 1973-November 1974, Mechanical Staff Engineer
8 for water treatment and management; November 1974-April
9 1975, Mechanical Engineer, Harry Allen Station; April 1975-
10 September 1977, Mechanical Engineer, Palo Verde Nuclear
11 Generating Station; September 1977-April 1978, Mechanical
12 Group Leader PVNGS Units 4 and 5 responsible for mechanical
13 review of PSAR and ER-CP; April 1978-August 1981, Mechanical
14 Group Leader, PVNGS responsible for contract administration,
15 water treatment, and licensing interfaces; August 1981-
16 Present, Deputy Mechanical Group Supervisor.

17 6. John W. Kluesener

18 a.-c. B.S., Chemical Engi-
19 neering, Northwestern University, 1964; M.S., Water Chemis-
20 try, University of Wisconsin, 1969; Ph.D., Water Chemistry,
21 University of Wisconsin, 1972.

22 d.(1) "A Demonstration of
23 Wastewater Treatment for Reuse in Cooling Towers at Fifteen
24 Cycles of Concentration," AIChE Water Resuse Conference,
25 Chicago, Illinois, May, 1975.

26

1 (2) "Process and Design
2 Considerations for a 90 MGD Wastewater Reclamation Plant,"
3 ASCE Convention, Portland, Oregon, April, 1980;

4 (3) "Management of Power
5 Plant Water and Wastewater in Water Short Regions," Ameri-
6 can Power Conference, Chicago, Illinois, April, 1980..

7 e. Bechtel, Inc. (Also
8 Bechtel Civil and Minerals, Inc.), May 1973-Present; Assis-
9 tant Project Engineer/Assistant Project Manager for the
10 PVNGS Water Reclamation Facilities.

11 7. Stephen H. Shepherd

12 a.-c. B.S., Chemistry, B.S.,
13 Physics, Willamette University, Salem, Oregon, 1974; M.S.,
14 Nuclear Engineering, Oregon State University, 1976; Business
15 Certificate, Golden Gate University, 1982.

16 d.(1) "The Environmental Im-
17 pact of Integrated Joint Nuclear - Hydrogen Electrical Gen-
18 eration Parks," ANS Transactions, 1976.

19 e.(1) United States Depart-
20 ment of Agricultural - Forest Service; May 1973-September,
21 1973; Lookout, Umpqua National Forest.

22 (2) Agripac, Inc.; July
23 1974-October 1974; Cannery Worker.

24 (3) Oregon State Univer-
25 sity; January 1975-August 1976; Research Assistant.

26

1 (4) Bechtel Power Corpora-
2 tion; September 1976-May 1978, Nuclear and Enviromental
3 Engineer engaged in analysis, design, and evaluation of
4 nuclear power plants; May 1978-December 1982, Nuclear and
5 Environmental Engineer for PVNGS, responsible for prepara-
6 tion of ER-OL and safety analysis; December 1982-May 1983,
7 Deputy Nuclear Group Supervisor for PVNGS, responsible for
8 PVNGS licensing.

9 8. Nora A. Blum

10 a.-c. B.S., Civil Engineer-
11 ing, Worchester Polytechnic Institute, Worchester, Massa-
12 chusetts, 1973; Civil and Environmental Studies, North-
13 eastern University, Boston Massachusetts, 1975-1978.

14 d.(1) "Seawater Closed Cycle
15 Cooling Systems," Power Engineering, August 1979:

16 (2) "A Survey of Capital
17 Costs of Closed Cycle Cooling Systems for Steam-Electric
18 Power Plants," American Power Conference, Chicago, Illi-
19 nois, April, 1979.

20 (3) "Design and Model Tests
21 of Shorefront Revetment-Ditch System for a Nuclear Power
22 Plant," ASCE Hydraulic Division Specialty Conference, Col-
23 lege Station, Texas, August, 1977.

24 e.(1) Stone and Webster Engi-
25 neers, Inc.; May 1973-January 1981; Civil and Environmental
26 Engineer assessing environmental impacts.

1 (2) Bechtel Power Corpora-
2 tion; February 1981-Present; Environmental Group leader
3 responsible for management of L.A. Power Division, Environ-
4 mental Projects.

5 9. Peter Su

6 a.-c. B.S., Civil Engineer-
7 ing, Cheng Kung University, Taiwan, 1963; M.S., Civil Engi-
8 neering, Colorado State University, Fort Collins, Colorado,
9 1969; Ph.D., Civil Engineering, Colorado State University,
10 1972.

11 d. Unavailable.

12 e.(1) Bechtel, Inc., May
13 1973-December, 1981; Geotechnical Specialist engaged in
14 investigation and analysis of geological and civil aspects
15 of Bechtel projects.

16 (2) Bechtel Power Corp.,
17 January 1982-Present; Engineering Specialist engaged in
18 engineering and analysis of civil and mechanical aspects of
19 Bechtel Power Corp. projects.

20 10. Vasken Najarian

21 a.-c. B.M.E., American Uni-
22 versity, Beirut, Lebanon, 1955; M.S.E., University of Cali-
23 fornia at Los Angeles, 1958.

24 d. None.

25

26

1 e. Bechtel Power Corp.; May
2 1973-April 1979, Mechanical Group Supervisor; April 1979-
3 Present, Assistant Project Engineer responsible for mechani-
4 cal system design.

5 MARLEY

6 1. Ivan F. Kuharic

7 a.-c. Purdue University, West
8 LaFayette, Indiana, 1949, B.S.M.E., Mechanical Engineering.

9 d.(1) "Analyze Your Bids,"
10 Marley Technical Bulletin R-58-P-2 (coauthor).

11 (2) "Psychrometrics and the
12 Psychrometer," CTI Paper #TP-231A.

13 (3) Numerous in-house ar-
14 ticles dealing with Sound Rating, Fan Selection, Basic
15 Theory and Thermal Performance of Cooling Towers.

16 e. Marley, 1969-Present;
17 Manager, Ratings and Performance Section; Duties include the
18 thermal and sound ratings of all evaporative cooling prod-
19 ucts, field tests and investigations, operating characteris-
20 tics of the products, placement and orientation studies,
21 technical assistance to the Sales Division.

22 2. O. L. Kinney

23 a.-c. B.S., Mechanical Engi-
24 neering, Finley Engineering College, 1964.

25 d. "Drift Technology for
26 Cooling Towers," (coauthor) The Marley Company, 1973.

1 e. Marley Cooling Tower Com-
2 pany 1966-Present; Assistant Engineer (1966-68); Engineer
3 (1968-69); Project Engineer (1969-74); Project Engineer I
4 (1974-76); Senior Engineer (1976-77); Design Consultant
5 (1977-80); Senior Design Consultant (1980-Present).

6 3. Paul A. Lindahl

7 a.-c. B.S., Nuclear Engineer-
8 ing, Kansas State University, Mannattan, Kansas, 1973.

9 d. "New Designs in Currently
10 Marketed Cooling Towers," 1977, Summer National Meeting,
11 American Nuclear Society.

12 e. Marley Cooling Tower Com-
13 pany 1968-Present; Summer engineering intern program of the
14 Marley Cooling Tower Company (1968-73); Project Engineer in
15 Ratings & Performance Section for wet/dry and dry cooling
16 tower rating and product development (1973-75); Responsible
17 also for rating and optimization of mechanical draft con-
18 crete towers (1975-82); Responsible for rating and product
19 development and testing of wet/dry and dry cooling towers
20 (1977-Present); Responsible for rating and optimization of
21 natural draft concrete cooling towers (1978-82); Senior
22 Engineer and Engineering Division Coordinator for Major
23 Project Proposals (1979-Present); Section Manager, Product
24 Evaluations Section; Responsible for all major project
25 optimizations, new product evaluations, rating and product

26

1 development for wet/dry and dry cooling towers (1982-
2 Present).

3 4. Joyce D. Holmberg

4 a.-c. B.S., Mechanical Engi-
5 neering, University of Kansas, 1951.

6 d.(1) Discussion of the
7 paper, "Cooling Tower Fan Performance," by George W. Forman
8 and Neil W. Kelly, Journal of Engineering for Power, Trans-
9 actions of the ASME, April, 1961.

10 (2) "Design and Development
11 of Large Cooling Tower Fan and Drive," ASME Paper No.
12 65-PET-11, September, 1965, by E. R. Allgeyer and J. D.
13 Holmberg.

14 (3) "Drift Technology for
15 Cooling Towers," (coauthor) The Marley Company, 1973.

16 (4) "Drift Management in
17 the Chalk Point Cooling Tower," from Symposium on Cooling
18 Tower Environment-1974, College Park, Maryland, March 4,
19 1974.

20 (5) "Debut of the Round
21 Mechanical Draft Tower, by J. B. Dickey, Jr., J. D. Holmberg,
22 R. E. Cates and T. W. Bugler III, for American Power Con-
23 ference, April 23, 1975.

24 e. Marley Cooling Tower Com-
25 pany 1951-Present; Asst. Project Engineer - fan design
26 (1951-54); Project Engineer - fan design and supervision of

1 other mechanical component design (1954-57); Research Asso-
2 ciate - development of mechanical components (1957-59);
3 Manager, Research & Development - departmental supervision
4 for all product and component development (1959-69);
5 Sciences Director - supervision of the Computer, Analytical,
6 and Laboratory Services Section of the Engineering Division.
7 Also, supervision of work by external consultants and major
8 test projects in outside laboratories (1969-Present).

9 5. Joe Ben Dickey, Jr.

10 a.-c. B.S., Civil Engineer-
11 ing, University of Colorado, 1946; 20 hours Business Ad-
12 ministration, University of Kansas, 1947.

13 d.(1) "Evaporative Cooling
14 Towers for Chemical and General Industries," 1978.

15 (2) "Managing Waste Heat
16 with the Water Cooling Tower," 1970.

17 (3) "Debut of the Round
18 Mechanical Draft Tower," by J. B. Dickey, Jr., J. D. Holm-
19 berg, R. E. Cates and T. W. Bugler, III, 1975.

20 e. Marley Company, 1947-
21 1980; Project Engineer - Engineering Div. (1947-49); Sr.
22 Application Engineer Sales Division (1949-53); Industrial
23 Sales Manager (1953-65); Asst. Division Manager, Research &
24 Engineering (1965-69); Vice President, Engineering (1969-77);
25 Vice President, Special Projects (1977-1980).

2 7. W. F. Quinn.

3
4 INTERROGATORY NO. 19. Has any expert or technician con-
5 ducted, or will any expert or technician conduct, any tests,
6 examinations, or inspections in connection with this pro-
7 ceeding? If so, please identify each such person.

8 ANSWER

9 19. The following persons or entities have con-
10 ducted or will conduct tests, examinations or inspections in
11 connection with this proceeding:

12 1. CEP (Controls for Environmental Pollu-
13 tion, Inc.) P.O. Box 5351, 1925 Rosina, Santa Fe, New Mexico
14 87502.

15 2. ESC (Environmental Systems Corp.), 200
16 Tech Center Drive, Knoxville, Tennessee 37912.

17 3. William E. Dunn; 108 S. Prospect Ave.,
18 Champaign, Illinois 61820.

19 4. University of Arizona, as described in
20 proposal previously provided to Petitioner, including Dr.
21 Charles Curtis, Dr. Delbert McCune and Dr. Leon Bernstein.

22 5. CDM (Camp, Dresser & McKee), 11455 West
23 48th Avenue, Wheat Ridge, Colorado 80033.

24 6. NUS Corporation, 910 Clopper Road,
25 Gaithersburg, Maryland 20878.

26

1 INTERROGATORY NO. 20. If your answer to the preceding in-
2 terrogatory is yes, identify any record or report of his
3 findings including:

4 a. the date of submission or expected sub-
5 mission of each such report;

6 b. the person to whom it was or is expected
7 to be submitted;

8 c. the person who has or is expected to
9 have custody of each such report;

10 d. the subject matter and finding of each
11 such report.

12 ANSWER

13 20.a.-d. The only reports prepared thus far are
14 those from CEP relating to the Low Volume Samplers and a
15 preliminary evaluation of the FOG model by Dr. Dunn. The
16 other individuals or entities identified in response to In-
17 terrogatory No. 19 are expected to submit reports, but Joint
18 Applicants do not have precise dates on which such reports
19 will be completed. It is anticipated, however, that ESC
20 will have completed its final report by June 30, 1983, and
21 that Dr. Dunn will have completed his report by June 30,
22 1983. The expected date of the University of Arizona's
23 report on the effects of salt drift on crop productivity has
24 been previously provided to Petitioner. CEP's and CDM's
25 reports are expected monthly. NUS' reports are expected

26

1 annually. The University of Arizona will also be making
2 reports biannually.

3 All of the reports will be submitted to Snell &
4 Wilmer. The CEP reports will relate to the data collected
5 by the Low Volume Samplers; ESC's report will deal with the
6 quantity of salt drift emitted from and the salt drift drop-
7 let size distribution associated with the PVNGS cooling
8 towers; Dr. Dunn's report will relate to validation of the
9 FOG Model and predictions of salt drift deposition; CDM
10 reports will analyze dustfall samples and cooling tower
11 basin water; the University of Arizona report on the effects
12 of salt drift on crop productivity will be as described in
13 the proposal previously provided to Petitioner; the Univer-
14 sity of Arizona's other reports will relate to analyses of
15 soil and vegetation samples; and the NUS reports will relate
16 to the review of data collected as part of the Salt Deposi-
17 tion and Impact Monitoring Plan.

18
19 INTERROGATORY NO. 21. State the amount each expert identi-
20 fied in response to Petitioner's First Set of Interroga-
21 tories, No. 56, is to be paid or has been paid and the basis
22 on which his compensation is to be determined.

23 ANSWER

24 21. The basis for the compensation of experts
25 identified in response to Petitioner's First Set of Inter-
26 rogatories is an hourly rate. The amount of the compensa-

1 tion is irrelevant to the subject matter of these proceed-
2 ings, and Joint Applicants therefore object to this inter-
3 rogatory on that basis.

4
5 INTERROGATORY NO. 22. Identify each exhibit which you pro-
6 pose to utilize at the hearing.

7 ANSWER

8 22. Joint Applicants have not yet identified the
9 exhibits it will utilize at the hearing.

10
11 INTERROGATORY NO. 23. Identify each person other than Joint
12 Applicants' attorneys, who prepared answers to these and the
13 preceding set of interrogatories and the specific interroga-
14 tories on which each such person worked.

15 ANSWER

16 Joint Applicants object to this interrogatory on
17 the grounds that it is burdensome and oppressive.

18
19 RESPECTFULLY SUBMITTED this 18th day of May,
20 1983.
