Serial No. 095
NO/GSS:acm
Docket Nos. 50-338
50-339
License Nos. NPF-4
NPF-7

Gentlemen:

AMENDMENT TO OPERATING LICENSES NPF-4 AND NPF-7
NORTH ANNA POWER STATION UNITS NO. 1 AND NO. 2
PROPOSED TECHNICAL SPECIFICATION CHANGE

Pursuant to 10 CFR 50.90, the Virginia Electric and Power Company requests an amendment, in the form of changes to the Technical Specifications, to Operating Licenses NPF-4 and NPF-7 for the North Anna Power Station, Units No. 1 and No. 2. The proposed changes are enclosed.

The proposed changes revise the Table 3.6-1 by the addition of containment isolation valves 36 & 37. It has been determined that to meet the requirements of NUREG-0737 Section II.B.3 for the Post Accident Sampling of the containment atmosphere, a dedicated penetration be provided. This dedicated penetration will require the addition of two containment isolation valves per unit.

Addition of the category I Containment isolation valves meets the requirements for containment isolation integrity as specified in the FSAR. Also, the installation of the valves satisfies the seismic design criteria for safety related systems.

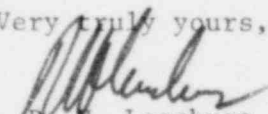

The addition of this modification does not introduce the possibility of an accident or malfunction. The margin of safety is not reduced by this change and this does not alter the basis for the Technical Specifications.

The proposed changes are requested during the refueling outages currently scheduled during March 5, 1982 - May 14, 1982 for Unit 2 and during May 21, 1982 - July 2, 1982 for Unit 1.

This request has been reviewed by the Station Nuclear Safety and Operating Committee and the Safety Evaluation and Control staff. It has been determined that this request does not involve an unreviewed safety question.

We have evaluated this request in accordance with the criteria in 10CFR170.22. It has been determined that this request requires a Class III amendment fee. Accordingly, a voucher check in the amount of \$4,400. is enclosed in payment of the required fee.

Very truly yours,

R. H. Leasburg
