EDWIN I. HATCH NUCLEAR PLANT UNITS 1, 2  
PROPOSED SNUBBER TECHNICAL SPECIFICATION CHANGES

Gentlemen:

By letter dated April 30, 1982, Georgia Power Company submitted revised, proposed changes to the plant technical specifications for safety-related snubber inspection and surveillance requirements. The aforementioned submittal superceded those proposed changes for Hatch Units 1 and 2 submitted earlier by letter dated April 15, 1981.

Review of the latest proposed changes to the technical specifications for Hatch Units 1 and 2 has revealed that the inoperable snubber conditions defined in the subject proposed changes do not reflect actual operability concerns. Consequently, Georgia Power Company wishes to withdraw the proposed changes submitted by our April 30, 1982 letter prior to their review and approval.

Discussion with our NRR Project Manager, Mr. G. Rivenbark, has indicated that review of the subject proposed changes has been assigned to NRC Region II. You are requested to contact NRC Region II and terminate review of the proposed technical specification changes submitted by our April 30, 1982 letter. New proposed changes for safety-related snubber inspection and surveillance will be submitted to NRR at a later date.

Should you have any questions in this regard, please contact this office.

Sincerely yours,

*L. T. Gucwa*
