June 3, 1983

Mr. A. Schwencer, Chief
Licensing Branch No. 2
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, DC 20555

SUBJECT: Limerick Generating Station, Units 1 & 2

REFERENCE: Meeting between Auxiliary Systems Branch and
Philadelphia Electric Company on March 30, 1983

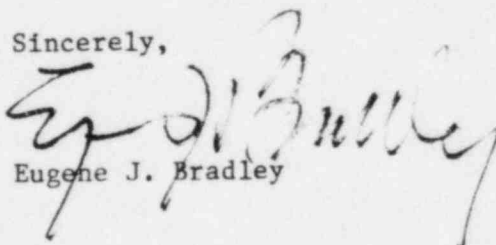

FILE: GOVT 1-1 (NRC)

Dear Mr. Schwencer:

The attached document is a revised draft response to Question 410.17 resulting from the discussions with Mr. John Ridgely, Auxiliary Systems Branch reviewer, at the referenced meeting.

The attached changes will be formally incorporated into the FSAR revision scheduled for June, 1983.

Sincerely,

Eugene J. Bradley

JTR/cam c/3

DRAFTQUESTION 410.17 (Section 3.6.1)

FSAR Section 1.1 states that the construction permit application was tendered on February 26, 1970. NUREG-0800, Standard Review Plan Branch Technical Position ASB 3-1 states the design of plants for which construction permit applications were tendered before July 1, 1973 are to follow the December 1972 letter from A. Giambusso (Appendix B to the Branch Technical Position) concerning the effects of pipe breaks. Verify compliance with NUREG-0800, Standard Review Plan, Section 3.6.1 and Branch Technical Position ASB 3-1.

RESPONSE

Limerick complies with the July 1981 revision of NUREG-0800, Standard Review Plan, Section 3.6.1 and BTP ASB 3-1 for consideration of the effects of postulated piping failures in fluid systems outside containment with the following exception:

Stress criteria for determination of break locations for ASME Class I piping were taken from BTP MEB 3-1 with exceptions as noted in the responses to Questions 210.17 and 210.21.

Hence, with the exception noted above, Limerick complies with the latest version of the Standard Review Plan requirements.

Sections 3.6.2.1.1.1, 3.6.2.1.1.2 and 3.6.2.1.1.3 of the FSAR have been revised for clarification.
