EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 Subsequent evaluation and testing activities performed on the Engineered
0 3 Safeguards Room Cooler Fans as a result of LER 83-007, have determined that
0 4 the thermal overload for one room cooler fan in each ES Room was tripped. A
0 5 tripped thermal O/L would have precluded fan operation until reset. A second
0 6 fan in one of the ES Rooms was found to be wired incorrectly, resulting in
0 7 the fan running backwards when operated. Condition reportable per TS
0 8 6.9.2.a(9). No threat to public health or safety resulted.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 Each tripped overload has been reset. Corrective action will include evaluation to determine if the thermal O/L's are correctly sized for their application. A surveillance procedure to routinely verify operability is also being investigated. The fan that ran backwards was apparently rewired incorrectly during the 1981 refueling outage. The wiring has since been corrected.
