DOCKET 50-528 CPPR-141  
Palo Verde Nuclear Generating Station  
Inspection Report Number 50-58/83-06

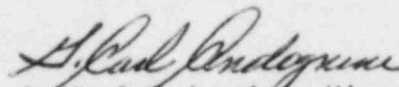

Inspection Report 50-528/83-06 dated April 5, 1983, requested a proposed and alternate period for the inspection of our Operations Quality Assurance Program and any portions of this program which will not be implemented by the proposed date.

We have reviewed our situation and suggest the period of August 22 - 26, 1983 for your inspection and August 29 - September 2, 1983 as an alternate.

Based on the findings of the combined Quality Assurance Readiness Evaluation, the following areas of the program may not be implemented by the date of the proposed NRC inspection:

- 1) Design Change Control
- 2) Procurement Control - Nuclear construction modification group
- 3) Document Control - Revised as-built drawings
- 4) Maintenance Implementing Procedures

Sincerely,

G. Carl Andognini, Vice President  
Nuclear Operations
