Response to 12/82 SER for Environmental  
Qualification of Safety-Related Electrical  
Equipment

Gentlemen:

This letter transmits the 90-day Response required by the NRC's December 1982 Safety Evaluation Report (SER) for the Environmental Qualification of Safety-Related Electrical Equipment.

Our 30-day Response reaffirmed our justification for continued operation and provided additional information for items for which justification for continued operation was not previously submitted.

This report addresses those items categorized by the NRC SER as I.B, II.A and II.B and provides our actions taken or planned concerning the qualification or replacement of each of these items. An executive summary, which provides a status for all items reported in our previous IE Bulletin 79-01B Submittal, has been included for your information.

We have reviewed with our equipment suppliers the current status of their proprietary positions regarding certain manufacturers documentation that applies to qualification. This information will be submitted under separate correspondence.

If you have any questions concerning this response, please contact my office.

Very truly yours,

*J. J. Carey*
