Arlington, Texas 76011

Reference: Docket No. 50-285

Dear Mr. Seidle:

### Activation of the Emergency Operations Facility for the Fort Calhoun Station

Effective February 1, 1983, the Omaha Public Power District's new Emergency Operations Facility (EOF), located near the main entrance to the North Omaha Station site, was declared operational, except as noted below. The interim EOF, located at the Fort Calhoun Station site, has been deactivated as an EOF. The backup EOF, located in the North Omaha Station basement area, has also been deactivated. The Radiological Emergency Response Plan and Emergency Plan Implementing Procedures have been revised to reflect the operation of the new EOF. All personnel required to report to the EOF have also received instructional information on the new facility.

The emergency functions performed at the new EOF will be:

- (1) Management of overall licensee emergency response.
- (2) Coordination of radiological and environmental assessments.
- (3) Determination of recommended public protective actions.
- (4) Organization and management of offsite resources to support the Plant Operations and Technical Support Center staffs.

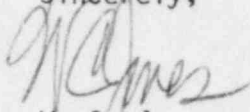

The new EOF contains adequate facilities for effective emergency response, but will not be considered fully operational until the data acquisition system is installed and operational and the ENS/HPN telephones are installed. The District's schedule for implementation of the EOF data acquisition system will be addressed in response to ONRR's Generic Letter 82-33, due April 15, 1983. The District's letter to your

office dated November 19, 1982 requested that the ENS/HPN telephones be installed; however, your letter of January 17, 1983 indicated that it would be approximately another 90 days until these telephones are installed. In the interim, adequate commercial telephone systems exist to ensure proper and necessary communications can be maintained.

Sincerely,

W. C. Jones  
Division Manager  
Production Operations
