EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 While performing the "RCIC PUMP OPERABILITY" procedure, the RCIC pump  
03 was discovered to pump at a maximum output of 360 gallons per minute.  
04 This event is contrary to Tech. Specs. section 4.6.E.1, item b (i.e.,  
05 RCIC must pump at least 400 gpm). The HPCI system was then proven oper-  
06 able and plant operation continued under a 7-day LCO as per Tech. Specs.  
07 3.5.E.2. The health and safety of the public were not affected by this  
08 non-repetitive event.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 The cause of this event was the failure of the turbine speed control  
1 1 circuit's signal converter. After the signal converter was replaced, the  
1 2 RCIC pump was functionally tested satisfactorily (as left flow rate:  
1 3 400 gpm). RCIC was then returned to normal operable status on 2/22/83.
