Perry Nuclear Power Plant  
Docket No. 50-440  
Withdrawal Of A Portion Of A License  
Amendment Request: Revisions To Clarify  
And Enhance The Primary Containment  
Leakage Specification

Gentlemen:

A License Amendment request was submitted on March 1, 1993 (PY-CEI/NRR-1576L), requesting changes to Technical Specification (TS) 3/4.6.1.2, "Primary Containment Leakage" and TS 3/4.10.1, "Primary Containment Integrity/Drywell Integrity." The first of the two major changes requested dealt with the concept of "as-left" and "as-found" Integrated Leakage Rates. The second major change incorporated shutdown requirements for instances when leakage rates are exceeded while the plant is operating.

On May 26, 1994, the NRC approved Amendment 60 to the Perry Nuclear Power Plant (PNPP) Operating License addressing the second change discussed above. The Safety Evaluation Report (SER) accompanying this Amendment indicated that the remainder of the request was still under review by the NRC Staff.

The portion of the original Amendment request that was not addressed in Amendment 60 is hereby withdrawn. There is no longer a desire to pursue this part of the change request. In addition, the associated requests for exemption to the requirements of 10 CFR 50 Appendix J as discussed in letter PY-CEI/NRR-1577L dated March 1, 1993, are hereby withdrawn.

If you have questions or require additional information, please contact Mr. James D. Kloosterman, Manager - Regulatory Affairs at (216) 280-5833.

Very truly yours,

120016
