EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10

0 2 A design deficiency was discovered which resulted in not meeting a Tech.

0 3 Spec. LCO as defined in paragraph 3.5.B when the circuit breaker for

0 4 Standby Gas Treatment System (SGTS) II was racked out for maintenance.

0 5 This caused SGTS II inlet and outlet valves to open allowing recircula-

0 6 tion to occur during System I operation. This condition could have

0 7 caused an insufficient negative pressure in the Reactor Building if the

0 8 SGTS was needed. This event is reportable per Tech. Spec. 6.9.2.a.9.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS 27

1 0 Occurrence cause is attributed to design deficiency. Racking out an

1 1 SGTS breaker removes power to the solenoid valves causing the inlet and

1 2 outlet diaphragm valves to fail open. Breaker was put back in service.

1 3 Procedures will be revised to prohibit breaker removal if conditions in

1 4 Tech. Spec 3.5.B are not met. Circuitry will be reviewed for pos. change.
