ULNRC-3069

Gentlemen:

CALLAWAY PLANT
DOCKET NUMBER 50-483
REVISION TO TECHNICAL SPECIFICATION
Reference: ULNRC-2450 dated July 30, 1991

Union Electric Company herewith transmits an application for amendment to Facility Operating License Number NPF-30 for the Callaway Plant. This amendment involves a revision to Technical Specifications 3.7.1.1 (Tables 3.7-1 and 3.7-2), Tables 2.2-1 and 3.3-2, and Bases 3/4.7.

Table 3.7-1 is revised to limit the maximum allowable power levels with inoperable main steam line safety valves.

Table 3.7-2 is revised to specify that the lift setting tolerance for the main steam line safety valves is $+3/-1\%$ as-found and $\pm 1\%$ as-left.

Tables 2.2-1 and 3.3-2 are revised by reducing the sensor error and the response time for the pressurizer pressure-high trip. Revising these items in this manner provides margin to relax the setpoint tolerance for the main steam line safety valves.

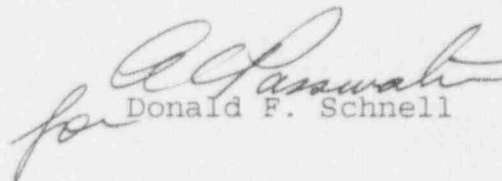

Bases 3/4.7.1 is revised as a result of the plant uprating and switch to V5 fuel. Therefore, this letter updates and supersedes the changes previously submitted by letter dated July 30, 1991 (ULNRC-2450). This Bases section is further revised to incorporate the methodology used to determine the maximum allowable power level with inoperable main steam line safety valves.

ADD

The Callaway Plant On-Site Review Committee and the Nuclear Safety Review Board have reviewed and approved this amendment application. Attachments 1 through 5 provide the Technical Specification changes, Safety Evaluation, Significant Hazards Evaluation, and Environmental Consideration, respectively. We have concluded that this amendment application does not involve an unreviewed safety question as defined in 10CFR50.59, nor a significant hazard consideration as determined per 10CFR50.92.

If you have any questions concerning this amendment application, please contact us.

Very truly yours,

for Donald F. Schnell
