

SOUTH CAROLINA ELECTRIC & GAS COMPANY

POST OFFICE 764

COLUMBIA, SOUTH CAROLINA 29218

O. W. DIXON, JR.  
VICE PRESIDENT  
NUCLEAR OPERATIONS

April 13, 1983

Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Subject: Virgil C. Summer Nuclear Station  
Docket No. 50/395  
Operating License No. NPF-12  
Steam Generator Modifications

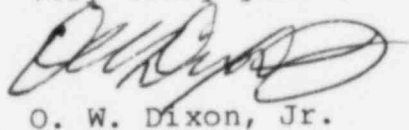

Dear Mr. Denton:

As a part of the plant modifications being made to correct the Model D3 steam generator vibration problem, South Carolina Electric and Gas Company (SCE&G) requires a change to Technical Specification Table 3.6-1. As shown in our February 14, 1983 letter, reverse flushing of the line between the steam generators and the feedwater isolation valves is possible by using valves 1678A, B, C-FW. The change in function of these valves requires their addition to this Technical Specification Table. Phase A isolation has been added, similar to the existing steam generator blowdown isolation valves 503A, B, C-BD which are included in the existing Technical Specification Table.

This change has been determined to be a Class III Amendment, and has been reviewed by the Plant Safety Review Committee and the Nuclear Safety Review Committee. Enclosed is a check in the amount of Twelve Hundred Dollars (\$1200.00) as required by 10CFR170.22.

If there are any questions, please let us know.

Very truly yours,

O. W. Dixon, Jr.
