0 2 With unit 1 in mode 1 (100% Rx power) at 0150 on 03/14/83, the ice condenser inlet  
0 3 doors (LID) blew open during damper alignment for an incore instrument room purge.  
0 4 The doors subsequently reopened once at 1117 CST on 03/14/83 during starting of a  
0 5 lower compartment cooler, and once at 1615 CST on 03/16/83 during normal contain-  
0 6 ment purge. These instances required entry into the action statement of LCO  
0 7 3.6.5.3. There was no effect upon public health and safety. Previous occurrences  
0 8 one (SQRO-50-328/81107).

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 The LIDs were forced open due to high differential pressure between upper and lower  
1 1 containment. This was caused by a lack of seal around the control rod drive missile  
1 2 shield. The LIDs were returned to service by reclosing of the doors following each  
1 3 occurrence (at 1030 and 1316 on 03/14/83 and 1615 on 03/16/83). During shutdown  
1 4 (following trip on 03/16/83), the purge system was rebalanced and the missile shield  
1 5 was resealed to prevent further similar occurrences.
