SUBJECT Waste Tank Farm Processing Schedule Update

TO Ted McIntosh, EM 343
Project Manager for West Valley
U. S. Department of Energy

Attached for your information is a weekly update of the Level II Schedule for Resumption of Waste Tank Farm Processing. Dates which have changed by more than ten working days from the previous schedule are highlighted with a "number". This number corresponds to a brief explanation of the reason for the schedule change. This explanation is contained in an attachment to the schedule.

If you have questions or comments, please call me at FTS 473-4780.

J. Alan Yeazel, Manager
Operations, Maintenance,
Engineering and Construction
West Valley Project Office

Titanium Zeolite

- (1) Delivery of the 7,200 lbs quantity of Zeolite is being shown 13 days later than previously scheduled due to 1) UOP's request to use a phosphate - free Titanium solution to treat the Zeolite, which requires additional WVNS testing prior to UOP's release to procure the solution and 2) the delay in placing the P.O. due to difficulties in analyzing column effluent samples from recent tests.

- (2) 8D-1 & 8D-2 Pump Fix and Installation

The current scheduled finish date for this activity has been accelerated by 17 days. This is a result of modifying the logic for the pump and motor installation and installing two tents instead of one previous to the installation of the pump and motor.

*On 5 Feb 1969, the
pump and motor were installed.*
