EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

On March 17, 1983, while conducting routine gaseous effluent sampling, it was discovered that the iodine/particulate collection device sample pump was de-energized. Investigation revealed that the pump was supplied off the same breaker as the R-41 Monitor sample pump which had been de-energized on March 11, 1983. Loss of the collection device pump resulted in non-representative iodine and particulate gaseous effluent samples for that week. The samples are required by Section 2.3.4e of the Environmental Technical Specifications.
