BRUNSWICK STEAM ELECTRIC PLANT, UNIT NOS. 1 AND 2
DOCKET NOS. 50-325 & 50-324/LICENSE NOS. DPR-71 & DPR-62
SUPPLEMENT TO REQUEST FOR LICENSE AMENDMENT
OPERATIONS ORGANIZATION CHANGES
(NRC TAC NOS. 79770 AND 79771)

Gentlemen:

By letter dated February 11, 1991, Carolina Power & Light Company (CP&L) submitted to the Nuclear Regulatory Commission a license amendment application for the Brunswick Steam Electric Plant, Units 1 and 2. The proposed amendment would revise Section 6, Administrative Controls to reflect changes to the Operations organization.

Since this submittal, the "Shift Foreman" position has been renamed and will now be titled "Shift Supervisor." The functional responsibilities and reporting relationships for the position remain unchanged.

The Company has reviewed the previously submitted significant hazards evaluation provided pursuant to 10 CFR 50.92 and has determined that the conclusions of the evaluation remain valid. The change in title from "Shift Foreman" to "Shift Supervisor" is administrative in nature and, therefore, meets the criteria for items constituting a no significant hazards consideration.

Enclosures 1 and 2 provide revised Technical Specification pages for Units 1 and 2, respectively, which reflect this title change. In the interest of time, CP&L has taken this opportunity to submit typed Technical Specification pages to assist the Staff in issuing the proposed amendment.

In addition, the Company has identified a typographical correction to proposed change 2 of the amendment request. Specifically, the reference to Technical Specification 6.2.2.d should instead refer to newly proposed Technical Specification 6.2.2.e. This clarification was discussed with the NRR Project Manager during a phone call on February 27, 1991.

An additional clarification discussed with the NRR Project Manager concerned the licensing of Shift Technical Advisors and Operations Managers. Specifically, the Shift Technical Advisors do not necessarily hold an active senior reactor operator (SRO) license; rather, they either hold or have held a senior reactor operator license, but the license may or may not currently be active. The Company has recently decided to discontinue the practice of Shift Technical Advisors holding a senior reactor operator license. These individuals will continue to receive training sufficient to receive a reactor operator license, but will not participate in the NRC license examination.

11

With regard to the Unit Operations Managers, both of the individuals filling these two positions hold a senior reactor operator license. However, at present, only one of these individuals holds an active senior reactor operator license. In the future, these individuals will continue to hold a senior reactor operator license in accordance with ANSI N18.1-1971, but these licenses may not necessarily be maintained active in status.

In accordance with 10 CFR 50.91(b), CP&L is providing the State of North Carolina with a copy of this letter.

Please refer any questions regarding this submittal to Mr. W. R. Murray at (919) 546-4661.

Yours very truly,

G. E. Vaughn
