Glen Ellyn, IL 60137

Subject: Response to Inspection Report No. 50-331/82-06

Dear Mr. Keppler:

During the exit interview for the routine safety inspection 82-06, we stated that the whole body counting procedures would be revised to include an adequate method to determine MPC-hours from whole body counting data by July 1, 1982. While performing the research on the procedural revision, it was discovered that the whole body computer library contains several errors which must be corrected before the final procedure can be issued. The whole body counter vendor has been contacted and a new library is being generated for the Duane Arnold Energy Center at this time.

Due to the additional time required to generate, review, and install the new library, we do not anticipate completion of the procedural revision until July 15, 1982.

During the above stated exit interview, it was also discussed that a review of all worker's whole body count data for 1981 and 1982 to date, would be reviewed by August 1, 1982. We currently anticipate that the review will now be completed by August 15, 1982, due to the extended time required to complete the procedural revision.

This matter has been discussed between Mr. Don Miller of your office and Mr. Ed Parsons of the DAEC staff. If there are any questions, we would be pleased to discuss this further with you.

Very truly yours,
