Docket No. 52-002

Document Control Desk
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: Combustion Engineering Standard Safety Analysis Report -
Design Certification, Amendment W

Dear Sirs:

The Combustion Engineering Standard Safety Analysis Report - Design Certification (CESSAR-DC) has been revised to address closure of confirmatory issues in the February 1994 System 80+™ Final Safety Evaluation Report, resolution of ACRS and NRC staff comments, and resolution of ABB-CE consistency review comments. A summary of the Amendment W revisions is enclosed with this letter, along with the affidavit required by 10 CFR 50.30(b). The thirty-seven (37) printed copies required by 10 CFR 50.4(b) will be provided by the first week of July. Three copies of Amendment W revisions have been provided directly to Mr. T. Wambach of NRC staff.

ABB-CE has conducted a detailed review of the System 80+ Technical Specifications in Chapter 16 of CESSAR-DC, including technical accuracy and consistency with other chapters. Therefore, ABB-CE hereby certifies that the information in the System 80+ Technical Specifications is consistent with design information throughout CESSAR-DC.

If you have any questions, please call me or Mr. Stanley Ritterbusch at (203) 285-5206.

Very truly yours,

COMBUSTION ENGINEERING, INC.

S. E. Ritterbusch for
C. B. Brinkman
